DETAILED ACTION

Allowable Subject Matter

Claims 1-11 are allowed.

The following is an examiner's statement of reasons for allowance: The cited document WO 00/17488 to Runia reference is considered to represent the most relevant state of the art, which discloses a well drilling bit assembly suitable for through-bit operation which includes a bit body 60 having upper and lower ends having a passageway there between. The bit body being attachable at its upper end to a tubular drill string, a closure element 70, 72 for passageway co-operating with the lower end of the bit body (see Fig. 4), a bit connecting means 86 for releasably connecting the closure element for selectively close the passageway, the well-drilling bit assembly further comprising an auxiliary tool 92 for manipulating the closure element, the auxiliary tool further comprising a too-connecting means 96 for selectively connecting the auxiliary tool to the closure element, and an operating means to operate the bit-connecting means which includes releasing the bit-connecting means. The prior art of record, however at least fails to teach or suggest that the tool connecting means (secondary latching means) and the bit connecting means (primary latching means) are operating together in a coupled manner by its last section, whereby the bit connecting means is not operable, and whereby in connected condition of the auxiliary tool with the closure element the bit-connecting means is operable by movement of the second member including the operating means between the first and the second positions .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
